

BIG PARTS REQUIRE BIG MACHINES

WE'VE GOT THAT COVERED.

**IN 5 AXIS MILLING
VERTICAL TURNING
CNC GRINDING AND
INTEGRATED CMM**

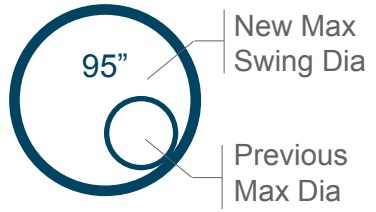

MULTIFUNCTION = ULTRA-EFFICIENT

Large complex parts. Multiple operations. One setup. Under precise control and maximum risk reduction.

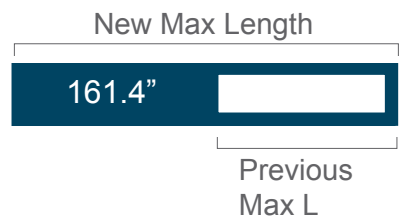

Increased Output
Increased Stability
Increased Efficiency

Reduced Set Up
Reduced Fixturing
Reduced Tooling

Doubled Capabilities

Alliance Innovative's maximum envelope has nearly doubled in size, which means more comprehensive handling of your biggest projects.

Alliance Innovative embarked on a growth campaign in 2007 with the construction of a new state of the art facility designed for expansion. We've been adding turning and machining centers ever since, and in 2011 implemented cell manufacturing.

The addition of large multifunction turning and machining centers is the next phase of our growth, but we're just getting started.

JUST GETTING STARTED

STRAIGHT FROM THE HORSE'S MOUTH

Scan each QR Code with your smartphone or visit the address below to learn more about the equipment straight from Chevalier or Okuma.

Chevalier FVM-4022DCL **Double Column Vertical Machining Center**

Four Axis combination lathe/machining centre
Designed and engineered for large work-piece machining
Extra large internal space
Rigid and precise structure combined with advanced control
Provides high precision operational performance.

Max Swing Dia
60" Max L

Okuma VTM-200YB **Complex Milling and Vertical Turning**

Five-axis combination lathe/machining centres performs turning, vertical, horizontal, and angled surface machining in one operation without reorienting the part in the chuck. The work spindle supported at two locations by large diameter roller bearings offer precision control for the production of complex parts.
